<CONTENTS>

GENERAL ACCOUNT

| | | | |
|---|----|--|----|
| Status of Leptogastrinae | 1 | 7. Genus <i>Lagynogaster</i> Hermann | 29 |
| Sister Taxon of Leptogastrinae | 2 | 8. Genus <i>Lasiocnemus</i> Loew | 30 |
| Leptogastrinae (Asilidae), <i>Systropus</i> (Bombyliidae), Vermileonidae, and <i>Dialysis</i> (Coenomyiidae) | 3 | 9. Genus <i>Leptogaster</i> Meigen | 30 |
| Key 1: World Genera of Leptogastrinae | 4 | Key 8: Groups and Isolated Species of the Nearctic <i>Leptogaster</i> | 31 |
| Comments on Key 1 | 5 | 9a. <i>Brevicornis</i> Group | 31 |
| Key 2: Nearctic Genera of Leptogastrinae | 6 | 9b. <i>Obscuripes</i> Group | 31 |
| Key 3: Nearctic Genera of Leptogastrinae | 7 | 9c. <i>Virgatus</i> Group | 32 |
| Key 4: American Genera of Leptogastrinae | 8 | 9d. <i>Flavipes</i> Group | 32 |
| Key 5: African Genera of Leptogastrinae | 9 | 9e. Isolated Species | 32 |
| Key 6: Oriental Genera and Subgenera of Leptogastrinae | 9 | Number of Species | 33 |
| Key 7: Species Groups of Japanese <i>Leptogaster</i> | 9 | 10. Genus <i>Leptopteromyia</i> Williston | 33 |
| Significance of Some Characters in Separating Genera | 10 | 11. Genus <i>Lobus</i> Martin | 34 |
| Allocations of the Japanese Species to Proper Genera | 10 | 11a. Subgenus <i>Lobus</i> (<i>Nanilobus</i>) Martin | 35 |
| Five North American Genera and the Japanese Species | 10 | Number of Species | 35 |
| <i>Psilonyx</i> and the Japanese Species | 11 | 12. Genus <i>Mesoleptogaster</i> Frey | 36 |
| Empodium and Some Male Genetalic Parts quoted from Martin (1968a) | 11 | 13. Genus <i>Ophionomima</i> Enderlein | 37 |
| Male Genitalia and Spermatheca quoted from Theodor (1976, 1980) and Artigas & Papavero (1988) | 14 | 14. Genus <i>Psilonyx</i> Aldrich | 37 |
| Female Genitalia apart from Spermatheca | 15 | 15. Genus <i>Schildia</i> Aldrich | 38 |
| Metasternum quoted from Hull (1962) | 16 | 16. Genus <i>Sinopsilonyx</i> Hsia | 39 |
| Significance of Genitalia and Metasternum as Generic Diagnosis | 16 | 17. Genus <i>Systemlogaster</i> Hermann | 40 |
| Distribution Patterns of Leptogastrinae quoted from Martin (1965a: 10-11) | 16 | 18. Genus <i>Tipulogaster</i> Cockerell | 41 |
| Biology | 17 | | |
| Biology, Adult Mouthparts and Ovipositor of <i>Leptogaster cylindrica</i> De Geer quoted from Melin (1923) | 17 | | |
| Immature Stages of <i>Leptogaster cylindrica</i> De Geer and <i>Leptogaster guttiventris</i> Zetterstedt quoted from Melin (1923) | 22 | | |

LIST OF GENERA

| | |
|---|----|
| 1. Genus <i>Ammophilomima</i> Enderlein | 24 |
| 2. Genus <i>Apachekolos</i> Martin | 25 |
| 3. Genus <i>Beameromyia</i> Martin | 26 |
| 4. Genus <i>Dolichosciscus</i> Janssens | 26 |
| 5. Genus <i>Eurhabdus</i> Aldrich | 27 |
| 6. Genus <i>Euscelidia</i> Westwood | 28 |

DISCUSSION AND CONCLUDING REMARKS

| | |
|--|----|
| Status and Sister Group of Leptogastrinae | 43 |
| Scutellum | 43 |
| Anal cell | 43 |
| <i>Eurhabdus</i> + <i>Leptopteromyia</i> + <i>Schildia</i> | 43 |
| <i>Psilonyx</i> | 43 |
| <i>Psilonyx</i> + <i>Beameromyia</i> | 44 |
| <i>Apachekolos</i> , <i>Beameromyia</i> , <i>Leptogaster</i> , <i>Psilonyx</i> and <i>Tipulogaster</i> from Nearctic and Neotropical Regions | 44 |
| <i>Leptogaster</i> | 44 |
| Geographical Distribution | 44 |
| Significance of Some Characters as Generic Diagnosis | 44 |
| Future Study of Leptogastrinae | 44 |
